Hasan Ekkeri

Full-Stack Developer

+91-9591617254 | hassanekkeri2@gmail.com | github.com/ekkerihasan | linkedin.com/in/hasan-ekkeri

Education

Anjuman Institute of Technology and Management — Bhatkal, India
Bachelor of Engineering in Computer Science and Engineering — 2023 – 2027

Professional Summary

Computer Science undergraduate and full-stack developer skilled in building web applications and backend systems with React, Next.js, Node.js, and Python. Built hackathon projects.

Technical Skills

Frontend: React, Next.js, Tailwind CSS, Responsive UI Design

Backend: Node.js, Express.js, Python, FastAPI, REST API Development

Databases: MySQL, PostgreSQL, Supabase

Tools & Platforms: Git, GitHub, Docker, Linux, Postman, VS Code, Vercel, Render

Projects

LANDWATCH – Land Acquisition Delay Early-Warning System | *Next.js, FastAPI, PostgreSQL, XGBoost, SHAP*

- Built a predictive early-warning system for land acquisition delays in Indian infrastructure projects, developed for Smart India Hackathon (SIH26017).
- Designed an ML pipeline using XGBoost to classify project delay risk into Low/Medium/High/Critical tiers, with SHAP attributions to explain each risk flag in plain language.
- Built a FastAPI and PostgreSQL backend with a Next.js/Tailwind dashboard, including a what-if simulator for testing intervention scenarios against predicted risk.
- Deployed the full stack (Vercel, Render, Neon) as a working prototype for mentor review.

Vidyut Mitra – AI Energy Bill Advisor | *Python, React, Supabase, Twilio WhatsApp API*

- Developed a team-based AI energy assistant to help users understand electricity bills, consumption patterns, and energy usage.
- Integrated the Twilio WhatsApp API to provide users with an accessible conversational interface for bill-related assistance.
- Implemented backend services using Python and Supabase for processing requests and storing application data.
- Developed a responsive React-based interface to demonstrate the platform and its energy-awareness features.

Reef Watchers – Real-Time Maritime Surveillance | *Go, React, MapLibre GL, WebSockets, AIS Data*

- Developed a team-based maritime surveillance platform during a national-level hackathon to identify suspicious vessel activity and potential illegal fishing.
- Processed real-time AIS vessel data to detect dark-vessel events, restricted-zone violations, and suspicious vessel movement patterns.
- Implemented an explainable risk-scoring workflow to assign an IUU fishing suspicion score based on detected behavioral signals.
- Built an interactive geospatial dashboard using React and MapLibre GL with WebSocket-based real-time updates.

Achievements

Hackathon Winner – Build for Billion, NITK Surathkal: Secured 1st place in a national-level hackathon.

Hackathon Finalist – Top 10: Placed among the top 10 teams in a national-level hackathon, selected from 100+ teams.

Hackathon Round 2 Qualifier: Advanced to Round 2 after ranking in the top 50 among 750+ teams.

Hackathon Participant: Participated in 4 national-level hackathons, including 1 win, 2 top-5 finishes, and 1 top-50 finish.
