EDUCATION

Anjuman Institute of Technology and Management
Bachelor of Engineering in Computer Science and Engineering

Bhatkal, India
2023 – 2027

PROFESSIONAL SUMMARY

Backend-focused Computer Science undergraduate with hands-on experience building RESTful APIs using Node.js, Express.js, and MySQL. Strong understanding of MVC architecture, authentication and authorization using JWT, relational schema design (3NF), and database optimization techniques. Experienced in designing secure, scalable backend systems with structured middleware, API validation, and performance-conscious query handling.

PROJECTS

Hospital Management System | *Node.js, Express.js, MySQL*

- Architected a backend system with 12+ RESTful API endpoints managing patients, doctors, appointments, and billing modules.
- Designed a 6-table normalized relational database schema (3NF) ensuring referential integrity and eliminating redundancy.
- Implemented JWT-based authentication and role-based authorization to secure protected routes.
- Applied indexing and optimized JOIN queries to improve query efficiency during multi-table operations.
- Structured middleware for input validation, centralized error handling, and request logging.
- Tested and validated API endpoints using Postman and managed environment configurations using secure variables.

Authenticated Quiz Platform | *Node.js, Express.js, MySQL*

- Developed 10+ API endpoints supporting user registration, login, quiz attempts, scoring, and progress tracking.
- Engineered session management and JWT-based authentication for secure user access control.
- Designed relational mappings between users, quizzes, questions, and results to maintain transactional consistency.
- Implemented structured error responses and asynchronous request handling using Promises and middleware.
- Managed version control using Git and followed modular project structure for scalable backend development.

TECHNICAL SKILLS

Backend Development: Node.js, Express.js, RESTful API Design, MVC Architecture, Middleware

Authentication & Security: JWT, Role-Based Access Control, Input Validation, API Security

Databases: MySQL, SQL, Relational Schema Design, Database Normalization (3NF), Indexing

Programming Languages: JavaScript, Python, C, C++

Tools: Git, GitHub, Postman, Linux, VS Code

Core Concepts: Data Structures & Algorithms, DBMS, System Design, Asynchronous Programming

ACHIEVEMENTS

Top-15 Finalist, Sustainathon Hackathon: Built GreenHeart-AI prototype within 24 hours as part of a competitive development sprint.

Led backend architecture design and database integration under strict time constraints.
